Secure Gateway

security for your strategic sites

- robust protection for your internal networks against threats from public networks such as the Internet

- choice of services including firewall; anti-virus protection for your messaging and Web connections; URL and content filtering; and forward- and reverse-proxy to optimize bandwidth, accelerate content delivery and increase security

- best-of-breed, fully managed security services

- powerful and modular solution for consolidation and better control of Internet access

- adaptable for central and strategic sites (headquarters, data centers, subsidiaries, etc.)

- worldwide availability and already adopted by many multinationals

Business Services

orange™

control and secure your Internet access

- Secure Gateway centralizes the Internet accesses for your extended business community. Each individual site can access the worldwide Web via a limited, optimized and consolidated number of gateways instead of each site managing its own access

- consolidation brings better control, optimized costs and a global security policy applicable to all your sites

set your security strategy, then delegate administration

You remain fully in control of your security policy, but we handle the implementation and day-to-day management. On your behalf, we:

- verify and deploy the services you've chosen, wherever and whenever you need them

- manage your security equipment (patch updates, anti-virus signature updates, license management, on-site replacement within four hours, etc.)

- monitor your equipment 24/7 and implement corrective actions as needed

- produce service performance reports and statistics

You can interact in real-time with Orange Business Services through a secure Web interface, allowing you to:

- submit change requests

- view your security policy in real time 24/7 and track changes made to it

- access vulnerability reports produced by an independent and trusted third party

optimize your resources

By delegating the management and implementation of your security policy to Orange, your costs are under control.

- your security and IT specialists are freed up to focus on core business projects. We partner with you to translate your security policy into a vector of business growth

- charges are fixed and predictable with a pricing structure that includes initial subscription to the service followed by a monthly subscription fee so you can rationalize expenditures

good to know

Our DEFEND managed security services (firewall, anti-virus, URL filtering, proxies) protect your internal network at the perimeter from the Internet. They're perfect for companies of all sizes, for all types of environments (intranets, extranets) and for centralized and multi-site topologies.
