

OT Security as a Service

Securing the intersections of IT and OT

Leverage the integrated capabilities of **Orange Business** and **Cisco Cybervision** for enhanced IT/OT Security

Orange Business, in partnership with **Cisco Cybervision**, is pleased to unveil an upgraded security architecture for IT/OT environments. Our extensive suite now incorporates new, customized services aimed at safeguarding your digital assets across all operational tiers—from production facilities to corporate systems.

Orange Business and **Cisco Cybervision** join forces to deliver state-of-the-art solutions, improving visibility, control, and cyber resilience in complex environments. Our partnership ensures your operations benefit from cutting-edge technology customized to meet your specific business requirements, bolstering operational security.

Innovation Leaders: Together, we drive innovation in industrial security, expertly supporting our customers' digital transformation in OT environments.

Enduring Partnership: With a 25-year-long relationship, we are jointly engaged in major OT security projects, delivering an outstanding end-to-end solution portfolio for industrialized security needs.

Cisco and Orange Business are esteemed global leaders in OT security, renowned for their extensive worldwide presence and comprehensive service offerings.

➤ **Managed OT security**

- ❑ **Visibility:** Maintains a comprehensive inventory of all assets to ensure continuous monitoring and management.
 - ❑ **Communication Mapping:** Identify and document the communication flow between assets to understand dependencies and potential risks.
 - ❑ **Vulnerability Management:** Regularly assess and address vulnerabilities to protect assets from potential threats.
- **Incident Detection and Response:** Robust monitoring and response protocols to swiftly identify and mitigate security incidents.
- **Secure Remote Access for OT Assets:** Ensuring secure and controlled remote access to OT assets to maintain operational integrity and prevent unauthorized access.

Protect your networks and assets

Design, segmentation and protection and access.

Network Architecture Design

- Network segmentation of IT and OT networks and micro-segmentation for OT networks
- Design of defense-in-depth architecture

Training & Awareness

- Training OT personnel about the cybersecurity risks, threat landscape, and best practices specific to OT environments

Managed Firewall

- Risk-based operations of the firewall and policy management
- Protection and detection of threats
- Virtual patching and response to security incidents

Managed Endpoint Security

- Malware prevention and detection on critical endpoints
- Risk-based platform operations and policy creation
- Threat detection, notification, and response

Secure Access Service Edge

- Managed Secure Access and Zero Trust Network Architecture
- SD-WAN, 5G

**Orange
Cyberdefense**

By choosing **Orange Business** and **Cisco Cybervision**, you are not just adopting a security solution; you're embracing a strategic partnership that prioritizes the resilience and integrity of your entire operational landscape.
